Certifications

Go: a linguagem do Google
Curso de Domain Driven Design
Masterizando o Tailwind
Curso de Comunicação entre sistemas
Curso de Arquitetura hexagonal

Leonardo Schunck Rainha

Backend Developer | Golang | Spring | Kotlin | Java
São Paulo, São Paulo, Brazil

Summary

I am a Backend Developer with a focus on building high-performance, scalable web applications and robust API architectures. With professional experience in Golang, Kotlin (Spring Boot), and Node.js, I specialize in optimizing system efficiency and modernizing legacy infrastructures to drive performance and cost-effectiveness.

My background includes significant contributions at BTG Pactual, where I worked on critical customer service tools and enhanced cloud monitoring using Terraform and Datadog. I have a proven track record of delivering measurable results, such as improving web scraping performance by over 66% through strategic language migration.

I am passionate about Microservices, Docker containerization, and Cloud infrastructure (AWS/GCP). I thrive on solving complex business problems and am constantly expanding my toolkit to include emerging technologies like gRPC and Event Storming.

Experience

Pismo
SW Engineer
June 2026 - Present (2 months)
São Paulo, Brazil

BTG Pactual
Backend Developer
April 2025 - June 2026 (1 year 3 months)
São Paulo, Brazil

I work within the Portal Admin and E-Consignado innovation initiatives, contributing to the optimization of operational tools used by advisors and BPOs, while modernizing the credit contracting experience through intelligent agents for end clients.

I work with Kotlin and Spring Boot in Back-end development, implementing Generative AI solutions using LangChain4j. I utilize the AWS ecosystem—including CloudFront, S3, and Cognito—alongside observability tools and CI/CD pipelines such as Grafana, Datadog, Jenkins, and ArgoCD, while also managing data analysis and manipulation with PostgreSQL.

I actively participate in the full development and support cycle, ranging from metrics analysis and production bug fixes to collaborating on the architecture of new projects. I align technical features with cross-functional teams and engage in prompt engineering, ensuring robust deliverables that align with business strategies.

Carvalho Aleixo Inc

Fullstack Developer

June 2024 - January 2025 (8 months)

Delaware, United States

Core Responsibilities:

- Designed and developed a Chrome Extension to display the country of sellers on Amazon, utilizing JavaScript for initial implementation.
- Migrated the WebSocket-based web scraping functionality from JavaScript to Golang, reducing scraping time from 1 minute to 20-30 seconds, achieving a performance improvement of over 66%.
- Gained expertise in Aerospike, a NoSQL indexed database, to optimize data storage and retrieval for high-performance applications.
- Built a robust API to insert Amazon product ASINs and retrieve product rankings by keywords using proxy-based web scraping techniques
- Implemented Redis for caching frequently accessed product data, significantly improving system efficiency and reducing database load

Baraúna Soluções Biológicas

Web Development

February 2024 - May 2024 (4 months)

Uchoa, São Paulo, Brazil

Core Responsibilities:

- Led the migration of the front-end from a no-code Bubble application to a React-based application, improving performance and scalability.
- Deployed the application using Google Cloud Platform (GCP), ensuring a robust and efficient cloud infrastructure

- Contributed to the development and maintenance of APIs written in C#, enhancing backend functionality and system integration

Education

FIAP

Bacharelado, Engenharia de Software · (February 2023 - December 2026)
